

# COUNTERTOP LIQUID SOAP DISPENSER

PRODUCT CODE

**7023**

MAY 2016

## Special Features

- ▲ CHROME PLATED BRASS
- ▲ 0.9L CAPACITY
- ▲ 152mm LONG SPOUT
- ▲ TOP FILL

## Description

The Countertop Liquid Soap Dispenser spout, piston and escutcheon assembly is manufactured from brass and is chrome plated to match other brassware. An ABS plastic shank connects the spout assembly to a 0.9L capacity polyethylene liquid soap reservoir mounted below the countertop.

## Operation

Activation is by depressing the spout stem. The dispenser is refilled from the top by using the special key provided to unlock the escutcheon and remove the valve body and dip tube from the shank to expose the reservoir opening. Liquid soaps used in the dispenser should be chloride free and pH neutral.

## Installation

The soap dispenser requires a 25mm dia hole in the countertop positioned so that the spout swivels to direct the soap outlet over the bowl or sink. An adjustable threaded shank allows for installation in countertops up to 102mm thick. The dispenser is supplied with a tool to remove the escutcheon after installation to allow easy refilling from the top. Please refer to full installation instructions for further guidance.
